New member in the CASS family:
Card Attachment Secure System - CASSera

The compact solution for low budget requirements

To offer a system that meets the requirements of the low budget segment, Otto Künnecke has enlarged the family of the Card Attachment Secure Systems with a **new machine concept** called **CASSera**. With a throughput of up to **2000 cards/h**, it is the perfect solution for small to medium sized applications. The CASSera can also be used as a **back-up machine** for existing OK systems.

As the smallest version of the CASS series,

it has a **compact design** and represents the first real **heavy-duty 24/7 industrial mailing machine** in this price segment. **High-quality materials** and its **sturdy design** guarantee a **long service life** and offer a **high investment security**.

Its operator friendliness helps **reduce set-up times**. The **CASSera** is able to either run **offline** with single-sheet feeder or **online** with single-sheet printer and due to its **modularity**, it can be **easily**

upgraded from a **small variant** with carrier printing and card attachment **to a big solution** including folding, enclosure feeding and inserting modules **without any problems**. It can be equipped with **various reading devices**.

As the **only system** in the card business, the CASSera can process a **range of formats** between **C6 long to C4**.

The **CASSera** offers the reliability of the **high-end card mailing machines** for a **price of a small mailer**.

Form feeding

Online
• Cut sheet printer

Offline
• Cut sheet feeder

Card processing

• Up to 2 input magazines
• Reading of chip, mag-stripe, barcode, OCR and contactless chip

Card attachment

• Up to 2 different cards can be attached
• Selective card attachment

Folding
• No fold
• Half fold
• C-fold
• Z-fold

Inserting

• Filling capacity:
  Up to 6 mm
• Envelope type:
  Water sealing long or short flap envelopes with windows
• Envelope size:
  Min 105 x 225 mm
  Max 353 x 353 mm
• Envelope weight:
  Min 75 g
  Max 110 g
